- Convert Figma designs into code and implemented business logic to handle multiple operation simultaneously .

Education

MastersOfComputerApplicationsin Frontend, Backend Jul 2024 - June 2026
Chhatrapati Shivaji Maharaj University

Achievements

Best Intern of the year In Qviq for excellent performance, Top Rank Holder in College Hackathon for Speed Ecommerce Website building, best employee of year at persist venture for timely and outstanding delivery of project and developing customer specific application

Project Experience

2D RPG Multiplayer Game

1. Created a 2D multiplayer RPG environment where players team up in real time to defend a castle against waves of zombies, featuring power-ups, special weapons, and in-game chat — built using Phaser, React, and Socket.io.
2. Ensure backend is scalable and reliable to processing huge requests under heavy load

JobsFlow - Jobs Applying platform

1. Build A system like flexjob where it directly fetches job from company career portal to avoid competition and increase chances of getting hired
2. Implemented scalable backend to ensure it scan jobs across 10000+ companies without point of failure and featured like ATS scanner as per job JD and find referrals for job
3. Added Extension to autofill job application form in company career page
